

Summer 2025 CodeHS Internship Application Challenge

Overview

We have an interesting and unique opportunity to apply for the last internship spots for Summer 2025 at CodeHS.

We had an incredible number of candidates, and we were unable to interview as many as we would've liked. **We have another 1-2 spots still available for this summer. We're opening it up to our entire candidate pool to see who can impress us with this project.**

Background

CodeHS is currently developing a new website named Bool which is an AI website builder. You can prompt to generate websites with English and modify them all online with further prompting or directly editing the code.

It is available at <https://bool.com>. We are actively working on it and making updates and improvements daily.

We have been working on it for just a few weeks, and there are a lot of kinks to work out, but we see a lot of promise.

Challenge

We want you to try out bool.com and use it to make anything that you find interesting or useful. This could be a personal website, a prototype, a utility, a game, or a tool to help students engage with a computer science concept at the k-12 level.

In addition to using bool, we want to hear your feedback. What did you like? What worked well? What could be better? What suggestions do you have for improving the product? Bonus points if you make something useful for people who use it. We track views so we can see if any projects get any usage or traction.

What are we looking for?

We're looking for you to make something cool and wow us with your feedback and your apps. Get creative.

We're a team of builders and doers. We make things happen and get a lot done.. You can use this as an opportunity to show us that you can be a builder and make things happen as well.

Deliverable

Your deliverable should be a single Google Doc with links to bools, a write-up, links to Loom videos that explain and show what you accomplished, and your feedback. The format is not important. Be clear, concise, and convincing. Pitch yourself with your work.

Submit at <https://forms.gle/vpbPrgRCRuk6Dcdp6>

Due Date: April 28th at 10am CT.

What happens after I submit?

We'll review your entry and let you know if we can schedule a zoom interview to review your application and make final decisions.

During the challenge process, we'll give you credits equivalent to a Bool Plus plan, so you have enough to explore and create.

Regardless of whether you're selected, if you submit *anything legitimate*, you'll get a coupon for 3 months of a Plus plan at no cost to you.

FAQ

Q: What happens if I hit my message limit on bool?

A: Email zach@codehs.com and include the email that you signed up for Bool with, and I can increase your limit

Q: Is Bool different from CodeHS?

A: Bool is a separate website that the CodeHS team is developing.

Q: I want to participate, but where do I start? What's an example of something I can do on Bool?

A: We want to hear from you, so anything you can think of that you might be interested in building is fair game. That being said, if you are looking for an idea, try to make a game or website that helps visualize, explain, or evaluate computer science concepts for middle schoolers or high schoolers.

Q: Can I work with anyone else?

A: You are welcome and encouraged to share bool with anyone else you know, but don't misrepresent your work. Your document should reflect the work that you personally did, and if you got help from other people, then you should reference and cite them.
